DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by McKenney et al. McKenney et al teaches an optical system having a window having a non-spherical curved outer surface and a curved inner surface; an optical corrector adjacent to the curved inner surface of the window, the optical corrector having a shape and position selected responsive to a shape of the window to establish selected optical characteristics of an optical ray after it has passed through the window and the optical corrector; a movable optical corrector support upon which the optical corrector is mounted; an optical train positioned such that the optical corrector lies between the curved window and the optical train, the optical train including at least one optical element operable to alter the optical ray incident thereon; a movable optical train support upon which the optical train is mounted; and a sensor disposed to receive the optical ray passing sequentially through the window, the optical corrector, and the optical train (see claim 1). Since the optical corrector shape is aspheric, it would inherently have a selectively non-uniform passive transmission optical property.

Allowable Subject Matter

Claims 11-20 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach or suggest a transmission optical corrector that has a selectively spatially varying index of refraction or a diffractive surface.
